

WHEN GAUSSIAN LEARNING STOPS SCALING: RESOLUTION-STABLE REPRESENTATIONS VIA OPERATOR-IDEAL REGULARIZATION

Anonymous authors

Paper under double-blind review

ABSTRACT

TODO: Summarize the problem, method, main result, and significance in one paragraph.

1 INTRODUCTION

TODO: Introduce the problem, state the main claim, summarize the contributions, and give a roadmap.

2 RELATED WORK

TODO: Position the paper relative to the relevant literature, using citations such as Kingma & Welling (2014).

3 METHOD AND THEORY

TODO: Define the setting, assumptions, method, and main theoretical results.

4 EXPERIMENTS

TODO: Describe the experimental setup, baselines, metrics, and results.

5 CONCLUSION

TODO: Summarize the findings, limitations, and broader implications.

AI USE STATEMENT

TODO: Replace this paragraph with the mandatory ICLR 2027 disclosure describing which generative-AI-assisted tasks were used, how their outputs were verified, and the authors' responsibility for the final work.

ETHICS STATEMENT

TODO: Add an ethics statement when applicable, or briefly explain why the work does not raise material ethical concerns.

REPRODUCIBILITY STATEMENT

TODO: Point readers to the sections, appendices, code, data, and configuration needed to reproduce the results.

REFERENCES

Diederik P. Kingma and Max Welling. Auto-encoding variational bayes. In *International Conference on Learning Representations*, 2014.

A ADDITIONAL MATERIAL

TODO: Add proofs, implementation details, ablations, and supplementary results.
